ABSTRACTED-PUB-NO: JP05310558A

BASIC-ABSTRACT:

Solid pharmaceutical compsns. comprising mannitol and/or lactose contain sorbitol powdery particles having bulk density of less than 60 g/100 ml.

The solid pharmaceutical compsns. contain 10-90 wt.% mannitol and/or lactose to the total wt. of the solid pharmaceutical prepsns..

The pref. compression method for the claimed compsns. is direct method, but a compression method after wet granulation can be employed. As effective pharmaceutical components, cardiotonic diuretics, antitussive s, antipyretic analgesics, antacids, and others can be included. Also, acid flavours and seasonings, etc. can be added.

USE/ADVANTAGE - The compsns. possess good disintegration properties because of the improvements in physicochemical properties such as hardness. Also, the unpleasant sensation in the oral cavity is improved, and no compression difficulties are seen. The prepsns. can be applied to the areas of pharmaceuticals and foodstuffs in the form of tablet, troche, pill, and chewable. Dissolution and absorbency of pharmaceuticals can be gained and, prompt efficacy of the drugs can be expected.

In an example, a mixt. of 250mg mannitol, 146mg lactose, 4mg hydroxypropyl cellulose, 50mg crystalline cellulose, 50mg Mg silicate, 50mg sorbitol (bulk density of 54g/100ml), and 6g Mg stearate was blended and compressed at 20 rpm and 1.5 ton of compression pressure to give tablets having 11.0mm in dia..
